

Contoso Retail - Analytics Estate Overview

Prepared for Fabric migration discovery. All details require customer confirmation before readiness decisions.

Workload	Platform	Scale	Dependency
Executive sales semantic model	Power BI	85 GB	Shared model; composite mode and calculated columns
Finance planning cube	SSAS	420 GB	MDX scripts and writeback workflow
Retail data integration	Azure Data Factory	2,600 GB	On-premises SQL Server and SAP through SHIR
Customer feature engineering	Databricks	7,400 GB	Custom Python wheels and private networking
Order analytics replica	Azure SQL	1,200 GB	Operational source with CDC requirements

Known constraints

Private connectivity is mandatory. Month-end reporting has a fixed two-hour processing window. Data Factory currently reaches on-premises SQL Server through a self-hosted integration runtime.
